ABSTRACT: This paper is an update of “Systematic Review of Aphids (Hemiptera: Sternorrhyncha: Aphidomorpha) of Poland with Host Plant Index. A Monographic Survey”. It includes information on 28 species and subspecies of Aphidomorpha. The information concerning 10 taxa refers to their synonymy: *Allaphis cyperi cyperi*, *A. ossianilssonii*, *A. producta*, *A. verrucosa verrucosa*, *Chaetosiphella stipae stipae*, *Iziphya bufo*, *Nevskya fungifera*, *Rhopalosiphum oxyacanthae*, *Thripsaphis (Neobacillaphis) szelegiewiczi*, *T. (T.) caricis*. The information concerning remaining 18 taxa refers to their first recording in Poland: *Aphis (Aphis) nerii*, *A. (A.) spiraecola*, *Brachycaudus (Mordvilkomemor) sedi*, *Cinara fresai*, *Eulachnus nigricola*, *Hyadaphis bicincta*, *Macrosiphum (M.) atragenae*, *M. (M.) holmani*, *Neopterocomma verhoeveni*, *Periphyllus californiensis*, *Rhopalosiphum rufiabdominalis*, *Schizachis (S.) rotundiventris*, *Stomaphis wojciechowskii*, *Tetraneura (T.) nigriabdominalis*, *Toxoptera aurantii*, *Uroleucon leontodontis*, *U. (Uromelan) minosmartellii*, *Viteus vitifoliae*.

KEY WORDS: Aphids, Hemiptera, Sternorrhyncha, Aphidomorpha, Poland, Update Systematic Review.

Introduction

The recently published monograph “Systematic Review of Aphids (Hemiptera: Sternorrhyncha: Aphidomorpha) of Poland with Host Plant Index. A Monographic Survey” (OSIADACZ, HAŁAJ 2010) includes the latest and

most comprehensive list of Polish aphids. However, during the process of its publication, revised compilations appeared in the publishing market which suggested changes in some taxa of aphids from Drepanosiphidae family (QUEDNAU 2010; WIECZOREK 2010). As the changes are quite important (especially in Saltusaphidinae subfamily), it seems reasonable to publish an update of the Polish aphid index. Another reason for publishing this update is the fact that in 2011 the register of accepted changes in the nomenclature of aphid taxa was published. These changes are of generic and above generic (NIETO NAFRÍA, FAVRET 2011) as well as species (BLACKMAN, EASTOP 2011) rank.

Since the moment when “Systematic Review...” was published, another important articles have also appeared. These papers include Aphidomorpha species which so far have not been recorded in Poland (DEPA, MRÓZ 2012; DEPA et al. 2012; DURAK 2012; HAŁAJ et al. 2011; IMIOLCZYK-CESSAK et al. 2011; JUNKIERT et al. 2011), as well as those which have a significant economic importance (*Viteus vitifoliae* – a quarantine organism) or those which are ‘alien and invasive’ (*Periphyllus californirnisis*). A separate issue was to explain the status of occurrence in Poland of some species previously recorded (ŁABANOWSKI 2008) and not listed in “Systematic Review...”. The following species: *Aphis (A.) nerii*, *Aphis (A.) spiraecola*, *Rhopalosiphum rufiabdominalis*, *Schizachis (S.) rotundiventris*, *Tetraneura (T.) nigriabdominalis* and *Toxoptera aurantii* have been found in Poland only in strictly controlled conditions on imported plants (in experimental or quarantine stations) and were destroyed after spotting. Their occurrence in other breeding sites or beyond them has not been documented as yet. However, their presence in Poland cannot be excluded. Taking into account this reason as well as statistical and cognitive aspects, they are placed in this annex with the question mark [?] to indicate that they potentially might occur beyond experimental conditions.

The species recorded in Poland for the first time (marked in the list by *), were identified with use of the keys for identification by HEIE (1986), BLACKMAN & EASTOP (2006, 2012) and original descriptions (BARBAGALLO, PATTI 1994; HILLE RIS LAMBERS 1956; LECLANT 1972).

A list of the new host plants recorded is presented in the table (Tab.).

Update list of Aphids

In order to preserve compatibility with “Systematic Review...” study the same order and quotation manner has been applied. Next to the species which have been recorded for the first time in Poland their distribution has also been provided. This information may constitute a supplement of pre-

vious study “The Aphids (Hemiptera: Sternorrhyncha: Aphidinea) of Poland. A Distributional Checklist” (OSIADACZ, HAŁAJ 2009). Other abbreviations, information of storing places of voucher specimens: DEEPULS – entomological collections of the Department of Entomology and Environmental Protection, University of Life Sciences in Poznan; DZUS – entomological collections of the Department of Zoology, University of Silesia in Katowice; MIZ – Henryk SZELEGIEWICZ’s collection of aphids, Museum and Institute of Zoology of Polish Academy of Sciences in Warsaw; ref. – only on the base of aphidological references.

Superfamily: **PHYLLOXEROIDEA**

Family: **PHYLLOXERIDAE**

Subfamily: Phylloxerinae

Tribus: Phylloxerini

Genus: *Viteus* SHIMER, 1867

Viteus vitifoliae (FITCH, 1855) – DEEPULS

Host plants: *Schefflera arbicola*

Distribution in Poland: Mazovian Lowland (Experimental Glasshouse Research Department of the Research Institute of Vegetable Crops and Horticultural Farm Tomaszewski)

Subfamily: Macrosiphinae

Tribe: Macrosiphini

Genus: **Brachycaudus** VAN DER GOOT, 1913

Subgenus: *Mordvilkomemor* SHAPOSHNIKOV, 1950

Brachycaudus (Mordvilkomemor) sedi (JACOB, 1964) – DZUS

2011 *Brachycaudus (Thuleaphis) sedi* (JACOB, 1964): IMIOLCZYK-CESSAK et al., p. 187

Host plant: *Rhadiola rosea*

Distribution in Poland: Tatra Mountains (Tatra National Park)

Genus: **Hyadaphis** KIRKALDY, 1904

Hyadaphis bicincta BÖRNER, 1942 – DZUS

2011 IMIOLCZYK-CESSAK et al., p. 187

Host plants: *Lonicera nigra*

Distribution in Poland: Tatra Mountains (Tatra National Park)

Genus: **Macrosiphum** PASSERINI, 1860

Subgenus: *Macrosiphum* PASSERINI, 1860

Macrosiphum (Macrosiphum) atraganae HOLMAN, 1980 – DZUS

2011 *Macrosiphum atraganae* HOLMAN, 1980: IMIOLCZYK-CESSAK et al., p. 188

Host plants: *Clematis alpina*

Distribution in Poland: Tatra Mountains (Tatra National Park)

**Macrosiphum (Macrosiphum) holmani* LECLANT, 1972 – MIIZ

Host plants: *Sanicula europaea*

Distribution in Poland: Pieniny Mountains (Trzy Korony, 14 IX 1964; leg., det. H. SZELEGIEWICZ)

Genus: **Uroleucon** MORDVILKO, 1914

Subgenus: *Uroleucon* MORDVILKO, 1914

Uroleucon leontodotis (HILLE RIS LAMBERS, 1939) – DZUS

2012 DEPA & MRÓZ

Host plants: *Lontodon* spp.

Distribution in Poland: Upper Silesia (Piekary Śląskie)

Subgenus: *Uromelan* MORDVILKO, 1914

**Uroleucon (Uromelan) minosmartellii* BARBAGALLO & PATTI, 1994
– DEEPULS

Host plants: *Campanula sibirica*

Distribution in Poland: Lublin Upland (Żmudź nature reserve,
7 VII 2010)

Tribe: Pterocommatini

Genus: *Neopterocoma* HILLE RIS LAMBERS, 1935

**Neopterocoma verhoeveni* HILLE RIS LAMBERS, 1956
– DEEPULS

Host plants: *Salix* sp. (hybrid willows ‘narrow-leaf’)

Distribution in Poland: Lublin Upland (Kamień near Opole Lubelskie, 8 X 2008)

Family: LACHNIDAE

Subfamily: Lachninae

Tribe: Stomaphini

Genus: *Stomaphis* WALKER, 1870

Stomaphis wojciechowskii DEPA, 2012 – DZUS
2012 DEPA et al.

Host plants: *Quercus robur*

Distribution in Poland: Upper Silesia (Piekary Śląskie – locus typicus!), Sandomierz Lowland (Bratkowice, Lubaczów, Sieniawa)

Subfamily: Eulachninae

Tribe: Eulachnnini

Genus: *Eulachnus* DEL GUERCIO, 1909

Eulachnus nigricola (PAŠEK, 1953) – DZUS
2011 IMIOLCZYK-CESSAK et al., p. 186

Host plants: *Pinus mugo*

Distribution in Poland: Tatra Mountains (Tatra National Park)

Tribe: Cinarini

Genus: *Cinara* CURTIS, 1835

Cinara fresai (BLANCHARD, 1939)
2012 DURAK

Host plants: *Juniperus scopulorum*

Distribution in Poland: Estern Beskydy Montains

STRESZCZENIE

Wykaz obejmuje 28 gatunków i podgatunków mszyc, z których 12 pierwszy raz podano z Polski po 2010 roku: *Brachycaudus (Mordvilkomemor) sedi*, *Cinara fresai*, *Eulachnus nigricola*, *Hyadaphis bicincta*, *Macrosiphum (M.) atraganae*, *M. (M.) holmani*, *Neopterocomma verhoeveni*, *Periphyllus californiensis*, *Uroleucon leontodontis*, *U. (Uromelan) minosmartellii*, *Stomaphis wojciechowskii*, *Viteus vitifoliae*. W przypadku 10 taksonów zmiany dotyczyły synonimiki nomenklaturycznej: *Iziphya bufo*, *Nevskya fungifera*, *Rhopalosiphum oxyacanthae*, *Thripsaphis (T.) caricis* lub synonimiki taksonomicznej: *Allaphis cyperi cyperi*,

A. ossianilssonii, *A. producta*, *A. verrucosa verrucosa*, *Chaetosiphella stipae stipae*, *Thripsaphis (Neobacillaphis) szelegiewiczi*. Ponadto wymieniono 6 gatunków, które do tej pory obserwowane były jedynie w warunkach doświadczalnych: *Aphis (A.) nerii*, *A. (A.) spiraecola*, *Rhopalosiphum rufiabdominalis*, *Schizachis (S.) rotundiventris*, *Tetraneura (T.) nigriabdominalis*, *Toxoptera aurantii*.

Uwzględniając powyższe dane do tej pory odnotowano w Polsce 757 gatunków i podgatunków Aphidomorpha należących do 176 rodzajów.
